eTurns TrackStock **Optimize**

Mobile app for tracking usage
and auto-replenishing stockroom
and truck inventory

Get analytics to optimize inventories and save cash

Scan items as they are used. The app records the usage and continually compares the quantity on hand with the minimum, and triggers an automated order up to the maximum. Use the eTurns Min/Max Tuning Dashboard to learn how much cash can be taken out of inventory, which results in one time savings as well as annual savings from reduced inventory carrying costs.

Use eLabels, SensorBins, or RFID digital kanban

eTurns offers an array of cutting-edge technology for easy automated replenishment or VMI. With eLabels, you just push a button to send a digital replenishment signal to any distributor. SensorBins offer "no-touch" weight scale replenishment. With RFID, you scan an empty bin past an RFID tower to trigger reorders.

Optimize consigned inventory with ease

Know how many of any kit can be built with the components in inventory thanks to real-time visibility. Manage component on-hand quantity, serial numbers, work-in-process, etc.

Manage kitting and subassemblies

Know how many of any kit can be built with the components in inventory thanks to real-time visibility. Manage component on-hand quantity, serial numbers, work-in-process, etc.

Create work orders

Track usage of parts and labor on work orders which triggers auto-replenishment from transfers or from orders to any supplier.
