eTurns TrackStock
Replenish

Mobile scanning app for replenishment of stockroom and truck inventory

eTurns TrackStock Replenish is 10x faster than replenishing through an e-commerce site or with a pencil and clipboard because it only requires a barcode scan and a tap to send the order to all your distributors. POs become paperless. It saves time, reduces errors and costs, and allows you to migrate to other TrackStock offerings that will optimize inventory levels when you are ready.

eTurns TrackStock offers 4 levels of automated replenishment

TRACKSTOCK **REPLENISH**	TRACKSTOCK **MANAGE LITE**	TRACKSTOCK **MANAGE**	TRACKSTOCK **OPTIMIZE**
✔ Scan barcodes to order or count	✔ **All features of Replenish**	✔ **All features of Manage Lite**	✔ **All features of Manage**

eTurns TrackStock
Replenish

**Mobile app for tracking usage
and auto-replenishing stockroom
and truck inventory**

Benefits of TrackStock Replenish

- Go paperless. Create digital POs by scanning to order or count. It's 10x faster than spreadsheets or eCommerce sites
- Use VMI or CMI: decrease errors, stockouts, and problems with bin stuffing
- Use one app to reorder from all suppliers
- Decrease procurement costs by up to 90% by reducing POs
- Set min/maxes for auto-replenishment after cycle counts

Get reports that drive efficiency, such as:

- The list of items for approval
- The items in a stockroom, listed by supplier
- The current orders to suppliers
- The cycle counts by inventory classification, based on turns

eTurns makes orders and counts more efficient

- Orders - Scan a barcode and enter the quantity. Order goes to the supplier's ERP.
- Cycle counts with min/maxes and auto-replenishment - Scan the item and type in quantity remaining. If quantity on hand is less than the minimum, eTurns will suggest an order up to the maximum. eTurns will calculate and schedule your items that should be counted based on turns. Keeps track of items counted and reports on uncounted items.

How you use TrackStock Replenish

Step 1 Scan to order or count items using a phone's camera. Capture with one scan: customer name, item number, location, package quantity, supplier, etc.
Step 2 Tap "submit" to send orders through eTurns to the distributor's ERP. No web searches or emailing.

Testimonials

"We were using a completely manual process...The value of our inventory on hand was north of $75,000 when we started using eTurns; now we have around $20,000 sitting on the shelves. The drain on my time has been significantly reduced and continues to improve."
—Brian Galowitz, Manager, Lakes Region EMS

"eTurns reduced the average cost on our 75 trucks from $20K to $14K, while maintaining the same service levels to our customers. We were also able to reduce our procurement staff from 8 reps to 3, moving them into other strategic roles."
—Carlos Echazabal, Director of Technical Operations, Service America

Free 30-day trial with training and support. Simple setup.

✔ Sign up at www.eturns.com
