

Simple. Optimized. Inventory and Equipment Management for EMS.

eTurns provides EMS agencies with automated par restocking, as well as email alerts for scheduled vehicle maintenance and device calibration. Our cloud software provides real-time visibility wherever mission-critical inventory is stored and creates electronic records for increased accountability and decreased liability.

How It Works

eTurns is cloud-based inventory and equipment management software accessible from anywhere. eTurns captures inventory information at the point-of-use (POU) in four ways:

iPhone Replenishment

Use an Android/iPhone/iPad/iPod Touch to replenish parts.

Inventory Management with Smartphone/PDA

Use a barcode scanner or smartphone to manage inventory.

eVMI Smart Replenishment with Sensors

Use sensors under bins of supplies together with eTurns Smart Replenishment software for fully automated replenishment. Sensors poll the weight of the bins regularly and complete physical inventory counts multiple times a day with no human involvement.

RFID Tracking

Track inventory receipts and consumption with no human intervention.

Right Supplies. Right Place. Right Time.

Managing EMS inventory manually can result in errors, stockouts, and waste. If the standard of care is to use a device, supply or medicine that is not available due to poor inventory management practices, you are putting your EMS group at risk of a lawsuit, according to Bound Tree Uni-

versity. Automate with eTurns cloud software to optimize inventory levels, manage liability, simplify restocking and save time and money.

- Set par/min/maxes to automate restocking.
- Access vendors' catalogs to find

new items to manage in your stockroom/truck.

- Drive efficiency with eTurns' powerful analytics, email alerts and reporting.
- Seamlessly integrate eTurns with other ERP or accounting solutions.

Schedule Vehicle and Device Maintenance, and Track the Parts You Need

eTurns helps you manage vehicle and equipment maintenance. Use eTurns to schedule the work and send email alerts for upcoming maintenance. We also manage the parts needed for that maintenance.

Benefits of the eTurns EMS Solution

- Provide real-time visibility into stock levels of devices, supplies and medicines in stockrooms, ambulances, fire trucks and more.
- Ensure accountability for supplies on a truck at the beginning/end of a shift.
- Track controlled substances.
- Track expiration dates to decrease waste.
- Avoid stockouts.
- Decrease shrinkage.
- Decrease the liability associated with poor inventory management.
- Simplify and automate the reordering process.
- Optimize inventories and reduce levels by up to 40%.
- Reduce PO costs by up to 90%.

Testimonials

eTurns is the proven leader in remote stockroom inventory management, and we do it simply, thoroughly and inexpensively. eTurns has hundreds of customers, including Graybar, Imperial Tool, Lonestar Fasteners, Nedco Canada, TTI, Wissco Irrigation, WL Neu Construction and more.

“Our company just implemented a 700 scale eVMI sensor-managed inventory solution at a large powergen manufacturer in Ohio. The customer was very impressed by the nearly \$1M stock reduction and access to real-time on-hand inventory data.”

—Robert Connors, CEO, Gexpro Services

“Since we’ve starting using eTurns with our customers four years ago, we’ve grown revenues over 20% with these customers due to just how simple they make it to track consigned inventory. Equally important, eTurns support is one of the best I have experienced.”

—Steve Vecchiarelli, VP Supply Chain, Digikey

“If the customer didn’t have eTurns we could not control the consigned inventory at the customer’s location. eTurns provides a very smooth way to track exactly what the customer used and needs to pay for. Without it, we would have a lot more confusion and negotiations with customers.”

—Ignacio Valdes, Anixter

“Very user-friendly and very easy to download info from the system. Great support from them. Easy to use product. There is nothing to dislike.”

—Lee Wise, President, Arbell Electronics

“eTurns provides real-time visibility into our customers’ component usage in an effort to optimize their inventory replenishment and decrease their cash-to-cash cycle times. I believe our customers will also appreciate the eTurns’ reporting and analytics capabilities. eTurns is one of the most advanced, yet cost-effective, remote storeroom inventory management solutions we have found on the market.”

—Jeff Gallacci, Director of Supply Chain, Arrow Electronics

“Over the past 10 years we have periodically taken a look to see if there were better solutions than what eTurns provides and each time we came up empty. ERP providers are too expensive and cumbersome and other inexpensive cloud software for inventory management was not as full-featured as eTurns.”

—Autrie Bacon, Global Supply Chain Solution Manager, Gexpro Services
