

Graybar IoT Travel Kit

Four demo-ready IoT technologies that automate replenishment at the point of use — each sized and priced as a kit you can carry into a customer's stockroom, set up on a bench, and run live on TrackStock.

SensorBins

WEIGHT-SENSING · ZERO-TOUCH

IoT weight sensors under each bin measure inventory at set intervals. When weight drops below the minimum, TrackStock automatically fires a replenishment order to the distributor's ERP — no scanning, no counting, no human error. Handles parts from 0.012 oz to 3,200 lb, up to 48 bins on a 7' x 4' rack.

One 6-per weighing shelf
+ one converter box

\$1,340

eLabels

ELECTRONIC SHELF LABELS · ONE-BUTTON ORDER

Digital labels that clip to bin rails where sensors or scanning aren't practical. One button press creates a suggested order and blocks duplicates; the label then updates itself to "on order," "back-ordered," and "shipped" as EDI messages come back from the supplier. Ten-year battery, displays min/max, par levels and QR codes.

RFID

BINBOX & TOWER · DIGITAL KANBAN

One reader head, two configurations. As a **BinBox** it mounts on the bin rack — drop the empty bin in and that single action fires a kanban order to the distributor, with no app, barcode or data entry. As a **Tower** it runs a freestanding 2-bin kanban: scan the front bin past the reader, advance the backup bin, and the replacement arrives before the second bin is empty. Also logs inbound inventory at the receiving dock.

10" x 10"

\$2,000

BoxLock

SECURE ACCESS · SCAN IN / SCAN OUT

A cellular-connected smart lock with a built-in barcode scanner that turns any cabinet, closet or job box into a secure digital stockroom — without the cost of a vending machine. Items scan in and out at the lock; TrackStock reorders at min/max and logs who took what, when — cutting shrinkage and holding compliance in regulated environments.
